

Travis County

Comprehensive Emergency Management Plan

Basic Plan

October 2021

For any questions related to this plan, please contact:

By mail:
Travis County Office of Emergency Management
PO Box 1748
Austin, TX 78767

Online: <https://oem.traviscountytexas.gov>

APPROVAL AND IMPLEMENTATION

This plan applies to all Travis County departments, agencies, boards, and commissions assigned emergency responsibilities in this plan and to others as designated by the Travis County Judge or Chief Emergency Management Coordinator as well as participating local governments in Travis County.

This plan is approved for implementation and supersedes all previous editions.

<p>12/22/2021</p> <hr/> <p>Date</p>	<p>DocuSigned by:  <small>C21317DB291D47D...</small> <hr/> <p>Andy Brown Travis County Judge</p> </p>

Travis County Jurisdictions Covered by this Plan:

Cities:

- Bee Cave
- Cedar Park
- Creedmoor
- Elgin
- Jonestown
- Lago Vista
- Lakeway
- Leander
- Manor
- Mustang Ridge
- Pflugerville
- Rollingwood
- Round Rock
- Sunset Valley
- West Lake Hills

Villages:

- Briarcliff
- Point Venture
- San Leanna
- The Hills
- Volente
- Webberville

Jurisdiction Signature Pages Are Kept on File with the Travis County Office of Emergency Management.

Definitions

Area Command (Unified Area Command). An organization established (1) to oversee the management of multiple incidents managed by an Incident Command System organization or (2) to oversee the management of large or multiple incidents to which several Incident Management Teams are assigned. Sets overall strategy and priorities, allocates critical resources according to importance, ensures that incidents are appropriately managed, meets objectives, and follows strategies. Area Command becomes Unified Area Command when incidents are multijurisdictional.

Disaster District. Disaster Districts are regional state emergency management organizations mandated by the Executive Order of the Governor relating to Emergency Management boundaries paralleling Highway Patrol Districts and Sub-Districts of the Texas Department of Public Safety.

Disaster District Committee. The Disaster District Committee consists of a Chairperson (the local Highway Patrol captain or command lieutenant) and agency representatives that mirror the membership of the State Emergency Management Council. The chairperson, supported by committee members, is responsible for identifying, coordinating the use of, committing, and directing state resources within the district to respond to emergencies.

Emergency Operations Center. Specially equipped facilities from which government officials exercise direction and control and coordinate necessary resources in an emergency.

Public Information. Information disseminated to the public via the news media before, during, and after an emergency or disaster.

Emergency Situations. This term describes a range of occurrences, from a minor incident to a catastrophic disaster. It includes the following:

- Incident. An incident is a situation that is limited in scope and potential effects. Characteristics of an incident include:
 - Involves a limited area and limited population.
 - Evacuation or in-place sheltering is typically limited to the immediate vicinity of the incident.
 - Warning and public instructions are provided in the immediate area, not community wide.
 - One or two local response agencies or departments acting under an incident commander typically handle incidents. Likewise, requests for

resource support are generally handled through agency or departmental channels.

- May require limited external assistance from other local response agencies or contractors.
- Incidents include the full range of occurrences that require an emergency response to protect life or property.
- **Emergency.** An emergency is a situation that is larger in scope and more severe in terms of actual or potential effects than an incident. Characteristics include:
 - Involves a large area, significant population, or critical facilities.
 - May require implementation of evacuation, sheltering-in-place, and mass care operations.
 - May require community-wide warning and public instructions.
 - Requires a sizable multi-agency response operating under an incident commander.
 - It may require external assistance from other local response agencies and contractors and limited aid from state or federal agencies.
 - The EOC will be activated to provide general guidance and direction, coordinate external support, and provide resource support for the incident.
 - Emergencies require supplemental state and local efforts and capabilities to save lives, protect property and public health and safety, or lessen or avert the threat of a catastrophe.
- **Disaster.** A disaster involves the occurrence or threat of significant casualties or widespread property damage beyond the local government's ability to handle its organic resources. Characteristics include:
 - Involves a large area, a sizable population, or essential facilities.
 - May require implementation of large-scale evacuation or shelter-in-place movements and mass care operations.
 - Requires community-wide warning providing instructions to the public.
 - Requires all responding agencies to operate under one or more incident commanders.

- Requires significant external assistance from other local response agencies, contractors, and extensive state or federal assistance.
- The Emergency Operations Center will be activated to provide general guidance and direction, provide emergency information to the public, coordinate state and federal support, and coordinate resource support for emergency operations.
- Regardless of the cause, a disaster causes damage of sufficient severity and magnitude to warrant federal disaster assistance.
- Catastrophic Incident. Catastrophic incident describes any natural or man-made occurrence that results in extraordinary levels of mass casualties, property damage, or disruptions that severely affect the population, infrastructure, environment, economy, national morale, or government functions. An occurrence of this magnitude would result in sustained national impacts over prolonged periods and would immediately overwhelm local and state capabilities. Therefore, all catastrophic incidents are Incidents of National Significance.

Hazard Analysis. A document published separately from this plan identifies the local hazards that have caused or possess the potential to adversely affect public health and safety, public or private property, or the environment.

Hazardous Material (Hazmat). When manufactured, stored, or transported, a substance in a quantity or form poses an unreasonable risk to health, safety, or property. By its nature, containment, and reactivity, the substance can inflict harm during an accidental occurrence. It is toxic, corrosive, flammable, reactive, an irritant, or a strong sensitizer and poses a threat to health and the environment when improperly managed. Includes toxic substances, certain infectious agents, radiological materials, and other related materials such as oil, used oil, petroleum products, and industrial solid waste substances

Inter-Local Agreements. Arrangements between governments or organizations, either public or private, for mutual aid and assistance during emergencies where the resources of a single jurisdiction or organization are insufficient or inappropriate for the tasks that must be performed to control the situation, commonly referred to as mutual aid agreements.

Stafford Act. The Robert T. Stafford Disaster Relief and Emergency Assistance Act authorizes federal agencies to undertake extraordinary measures designed to assist states' efforts in expediting the rendering of aid, assistance, emergency services, and reconstruction and rehabilitation of areas devastated by disaster.

Standard Operating Procedures. Approved methods for accomplishing a task or set of tasks. These procedures are prepared at the department or agency level and referred to as Standard Operating Guidelines.

Overview

One of the essential functions of government is to protect its citizens, their property, and their way of life. In Travis County, elected officials and the county judge are responsible for meeting dangers to the county and its people presented by emergencies or disasters. The Travis County Emergency Management Plan (County Plan) describes how this duty is discharged in response to incidents and events of county significance.

Purpose

The county plan aims to define the organization, establish operational concepts, assign responsibilities, and outline coordination procedures for achieving emergency management objectives. The County Plan is the primary planning document for county-level comprehensive emergency management actions.

Scope

The County Plan is an all-hazards emergency operation plan that applies to incidents and events of significance throughout Travis County. The County Plan describes the high-level responsibilities in identifying, mobilizing, and deploying resources to respond to incidents throughout the county.

Because Travis County is committed to a whole-community preparedness approach, the County Plan and those involved in emergency preparedness planning strive to meet the needs of all people, including people with access and functional needs.

The County Plan is intended to provide guidance and is not prescriptive or comprehensive. Therefore, readers should use judgment and discretion to determine the most appropriate actions at the time of an incident.

Plan Organization

There are five parts to the County Plan:

- Basic Plan
- Functional Annexes
- Hazard Annexes
- State of Texas Acronyms and Terms book

The County Plan is designed to integrate with other agency or entity plans and annexes.

Component	Description
Basic Plan	Describes the county's emergency management organization and the statewide system of coordination.
Functional Annexes	Outlines the objectives, policies, concepts of operations, and responsibilities of response agencies relative to unique functional activities before, during, and after incidents that exceed the capacities of local jurisdictions. Other supporting plans may augment these annexes.
Hazard-Specific Annexes	Address how Travis County responds to specific types of incidents and may be referenced by other annexes. In addition, other supporting plans may augment hazard annexes.
State of Texas Acronyms and Terms Book	Defines the acronyms and abbreviations used throughout the County Plan.

State and Federal Alignment

The County Plan supports the U.S. Department of Homeland Security's National Preparedness Goal:

"A secure and resilient nation with the capabilities required across the whole community to prevent, protect against, mitigate, respond to, and recover from the threats and hazards that pose the greatest risk."

The County Plan complies with Homeland Security Presidential Directive 5 "Management of Domestic Incidents," Presidential Policy Directive 8 "National Preparedness," the National Response Framework, and Executive Order RP 40, which mandates the adoption of the National Incident Management System as the "declared state standard for incident management."

The County Plan provides an all-hazards emergency planning framework that informs local and regional emergency operations plans.

General Information

Plan Information

Plan Name:	Travis County Comprehensive Emergency Management Plan
Jurisdiction:	Travis County
Type of Jurisdiction:	County
Disaster District:	12
Region:	6
Geography:	<p>Travis County is located in the southern part of central Texas, between San Antonio and Dallas–Fort Worth. The county's geographical center lies two miles northwest of downtown Austin at 30°18' north latitude and -97°45' west longitude. According to the U.S. Census Bureau, the county has 1,023 square miles, of which 990 square miles is land and 33 square miles is water.</p> <p>Travis County straddles the Balcones Fault, the boundary between the Edwards Plateau to the west and the Texas Coastal Plain to the east. The western part of the county is characterized by the karst topography of the Texas Hill Country, while the eastern part exhibits the fertile plains and farmlands of the Blackland Prairie. The Colorado River meanders through the county from west to east, forming a series of lakes (Lake Travis, Lake Austin, and Lady Bird Lake) developed for flood control, energy generation, and recreation purposes.</p>
Emergency Management Objectives:	<p>The overall objectives of the County Plan are to:</p> <ul style="list-style-type: none">• Protect all people within Travis County against the most significant threats and hazards in a manner that allows vital interests and way of life to thrive.

- Reduce the loss of life and property by lessening the impact of disasters.
- Respond quickly to save lives, protect property and the environment, and meet basic human needs after an incident.
- Assist communities recovering from an incident with continued stabilization of vital life support systems and community restoration.
- Ensure the delivery of county services to the public.

These objectives apply to all hazards and may be used to assist with any type of disaster that requires state-level emergency management response support.

Lake Travis ISD
Manor ISD

Designated Transportation Officer Name: N/A

Director of Utilities (For government-run/operated utilities): N/A

Planning Assumptions

Planning assumptions are considered information accepted by planners as valid to provide a planning framework. County planners have made the following assumptions in preparing the Basic Plan:

- Achieving and maintaining effective individual and community preparedness is the primary mitigating factor against disasters and can reduce the immediate stress on the public and response organizations.
- Disaster planning at the regional and state levels is based on the pre-incident identification of at-risk populations and facilities and the determination of resource shortfalls and contingencies.
- Assistance from state agencies is available as long as the agencies' fiscal and internal operational resource needs are met.
- When county property is affected, the responsible county agency will utilize its resources in coordination with local authorities and establish communications with the Emergency Operations Center.
- The state and federal emergency support functions (if activated) will work together to coordinate state and federal resources.
- Depending on the magnitude of the incident, resources from other states or the federal government may not be available for use in Texas for as long as 72 hours after the incident occurs.
- The state intends to ensure that individuals who have access and functional needs receive lawful and equal assistance before, during, and after a disaster.
- Local planning efforts do not assume that federal assistance is available.
- Government resources alone cannot meet all the needs of those affected by major disasters.

Hazard Summary

Hazard Type	Likelihood of Occurrence	Estimated Impact on Public Health and Safety	Estimated Impact on Property
Natural Hazards			
Drought	Highly Likely	Moderate	Moderate
Earthquake	Unlikely	Limited	Limited
Flash Flooding	Likely	Limited	Moderate
Flooding (river or tidal)	Unlikely	Limited	Moderate
Hurricane	Unlikely	Limited	Limited
Subsidence	Unlikely	Limited	Limited
Tornado	Occasional	Major	Major
Wildfire	Likely	Major	Major
Winter Storm	Occasional	Major	Moderate
Technological Hazards			
Hazard Type	Likelihood of Occurrence	Estimated Impact on Public Health and Safety	Estimated Impact on Property
Dam Failure	Unlikely	Major	Moderate
Energy / Fuel Shortage	Occasional	Moderate	Limited
Hazmat/Oil Spill (fixed site)	Unlikely	Limited	Limited
Hazmat/Oil Spill (transport)	Occasional	Limited	Moderate
Major Structural Failure	Occasional	Moderate	Moderate

Hazard Summary

Hazard Type	Likelihood of Occurrence	Estimated Impact on Public Health and Safety	Estimated Impact on Property
Nuclear Facility Incident	Unlikely	Limited	Limited
Water System Failure	Occasional	Moderate	Moderate
Security Hazards			
Hazard Type	Likelihood of Occurrence	Estimated Impact on Public Health and Safety	Estimated Impact on Property
Civil Disorder	Unlikely	Limited	Limited
Enemy Military Attack	Unlikely	Limited	Limited
Terrorism	Unlikely	Limited	Limited
Cyber Attack	Unlikely	Limited	Moderate

Concept of Operations

Emergency management activities vary significantly by type, size, and complexity of an incident. This section outlines the general concept of operations for the county's planned response to support response and recovery operations.

Objectives

The overall objectives of the County Plan are to:

- Protect all people within Travis County against the most significant threats and hazards in a manner that allows vital interests and way of life to thrive.
- Reduce the loss of life and property by lessening the impact of disasters.
- Respond quickly to save lives, protect property and the environment, and meet basic human needs after an incident.
- Assist communities recovering from an incident with continued stabilization of vital life support systems and community restoration.

These objectives apply to all hazards and may be used to assist with any type of disaster that requires state-level emergency management response support.

Emergency Management Coordination

Following are the basic concepts, sequences, and procedures that drive preparedness and response in Travis County. Note that the county and cities operating under this plan rely on the National Incident Management System to plan, train, exercise, and respond to emergencies and disasters.

In Travis County, the initial response to emergencies and disasters is conducted by local jurisdictions working with city or county emergency management officials. Local government entities are expected to use their resources and the resources available through mutual aid agreements before requesting assistance from the state. Early communication and coordination are encouraged when additional resource needs can be anticipated.

When a jurisdiction's response resources are overwhelmed, imminently threatened, or a local jurisdiction anticipates a resource need, Travis County should be the first channel through which the jurisdiction requests assistance.

If additional resources are required, the jurisdiction may request aid from its local Disaster District Committee ([Tex. Adm. Code § 7.24](#)). The Disaster District Committee serves as a clearinghouse for local emergency response support from state agencies and entities. When activated, the Disaster District Committee is also the liaison between the local jurisdictions and the State Operations Center.

The Travis County Emergency Operations Center serves as a coordination and communications hub, allowing personnel to gather, evaluate, and distribute critical information and resources and respond to emergencies and disasters. Depending on the severity of the emergency or disaster, the readiness level of the Emergency Operations Center will range from a level IV Normal Conditions to level I Emergency Conditions, which requires the activation of additional personnel to support operations. Appendix A outlines readiness guidelines for the Emergency Operations Center. In addition, Appendix B provides an example Emergency Operations Center organizational chart depicting the county's incident command structure.

When the scope of the incident has expanded beyond the resource capabilities of the state, the state may seek intrastate mutual aid, assistance from voluntary and private sector organizations, and federal aid as needed. In most cases, for the federal government to assist, a federal disaster declaration is required. Federal assistance is not intended to compensate a community for losses fully but to supplement available resources and prevent conditions the community could not reasonably recover.

Concepts of operations, county objectives, and the responsibilities of entities relative to unique functional or hazard-specific activities are addressed in the annexes to the County Plan. Appendix C identifies the objectives of each emergency support function annex. Appendix D identifies entities playing a lead or supporting role in the response, according to the emergency support function.

Emergency Authorities

Key federal, state, and local legal authorities pertaining to emergency management are listed in General Information section of this plan. Texas statutes and the Executive Order of the Governor Relating to Emergency Management provide local government, principally the chief elected official, with several powers to control emergency situations. If necessary, Travis County shall use these powers during emergency situations. Additional information on emergency authorities can be found in the Administration, Logistics, and Finance Section of this document.

Organization and Assignment of Responsibilities

This section describes the organization and responsibilities of stakeholders with critical capabilities during emergency management preparedness, response, and initial recovery.

Federal Emergency Management Agency

The Federal Emergency Management Agency has the primary responsibility for coordinating federal disaster assistance. No direct federal disaster assistance can be authorized before a Presidential emergency or disaster declaration. The Federal Emergency Management Agency supports emergency management throughout the nation and in Texas by providing tools, resources, and guidance to help Texas' emergency management coordination. When a disaster occurs that exceeds, or is anticipated to exceed, the state's resource capabilities, the federal government implements the National Response Framework to access federal departments and agency capabilities, organize the federal response and ensure coordination with all response partners, Federal Emergency Management Agency Region VI and Texas Division of Emergency Management

State Government

Governor

Under [Tex. Gov. Code Ch. 418](#), the Governor is granted broad powers to control disasters. The Governor may issue executive orders, proclamations, regulations, and this plan and amend or rescind them. Executive orders, proclamations, and regulations have the force and effect of law.

The Governor also has additional authority to issue directives calculated to protect life and property and control and terminate an emergency when a state of emergency is proclaimed under provisions of [Tex. Gov. Code Ch. 433](#).

Texas Division of Emergency Management Chief/Texas Emergency Management Council Chair

Under [Tex. Gov. Code Ch. 418](#), the Texas Division of Emergency Management Chief, is responsible for the day-to-day management and coordination of statewide emergency management activities, operating the state operations center, and executing coordination and control of statewide resources during emergency response and recovery operations.

During response operations, the Texas Division of Emergency Management Chief establishes objectives and authorizes mission assignments to state agencies, requests commitment of federal assets and interstate mutual aid emergency response forces, and assigns operational control as required.

According to Executive Order GA 05, the Texas Division of Emergency Management Chief also serves as the Chair of the Texas Emergency Management Council and, after consultation with the Council and other relevant state agencies, shall advise the Governor, lieutenant governor, and the speaker of the house of representatives on critical matters relating to emergency management for natural and human-caused events, emergencies, and disasters that may occur in this state.

Texas Division of Emergency Management

The Texas Division of Emergency Management coordinates and manages the state's emergency management program, which is intended to ensure the state and its local governments mitigate, prepare for, respond to and recover from emergencies and disasters. In addition, the Texas Division of Emergency Management is responsible for the day-to-day management and coordination of statewide emergency management activities, operating the state operations center, and coordinating statewide resources during disaster response and recovery operations.

Regional State Coordinators and District Coordinators are Texas Division of Emergency Management employees who serve as local emergency management liaisons assigned to the state's Disaster Regions and Disaster Districts. Regional State Coordinators and District Coordinators work directly with local government officials, volunteer groups, and private sector partners. District Coordinators also assist the Disaster District Committee chairperson in maintaining Disaster District Committee operations and assist during disaster activations.

Disaster District Committees

A Disaster District Committee consists of representatives from state agencies, boards, commissions, and organized volunteer groups with membership on the Texas Emergency Management Council. The chairperson is the commanding officer of the Texas Highway Patrol district or sub-district where the jurisdiction is located. The chairperson informs the chief of the Texas Division of Emergency Management on disasters and emergencies. The chairperson is assisted by the Texas Emergency Management Council representatives assigned to that district. The chairperson serves as the liaison between their district's local officials and the State Operations Center during large-scale disasters or emergencies.

Local Government

County Government

The county judge is the emergency management director for the county, responsible for maintaining the emergency management program within Travis County (Tex. Gov. Code § 418.1015). In addition, the county judge may appoint an emergency management coordinator to help discharge these duties.

The county judge may declare a local disaster when there is an immediate threat, without the consent of county commissioners. However, the declaration may last no longer than seven days unless continued by county commissioners.

The Travis County Office of Emergency Management is Travis County's principal

organization for emergency management. The Chief Emergency Management Coordinator acts as the staff advisor to the County Judge on emergency management matters. The Office of Emergency Management is responsible for the development and maintenance of this document: **The Comprehensive Emergency Management Plan**. The Office of Emergency Management, subject the direction and control of the County Judge, is responsible for activating the Emergency Operations Center and coordinating emergency management activities within Travis County.

The Emergency Management Coordinator is responsible for maintaining plans, coordinating local planning and preparedness activities, arranging appropriate training for local emergency management personnel and emergency responders, and coordinating periodic emergency exercises to test plans and training. The Emergency Management Coordinator is also responsible for activating, coordinating, and managing the Emergency Operations Center, developing procedures for its operation, and conducting training for those who staff it.

During response operations, the Emergency Operations Center is the central point within Travis County for coordinating information and resources during emergencies and major disasters. The Emergency Operations Center receives resource requests from impacted communities in Travis County, as well as mutual aid requests from neighboring partners. If unable to provide the capabilities needed to fulfill a resource request, the Emergency Operations Center may request assistance from the State Operations Center. If Travis County is included in an emergency or major disaster declaration, the primary mission of the Emergency Operations Center is to ensure equal access to federal disaster assistance programs, activities, benefits, and/or services, contingent on eligibility.

Cities and Villages

There are twenty-one incorporated cities and villages in Travis County. As a political subdivision of Texas, each city and village must either establish their own local organization for emergency management or join another local organization for emergency management. When establishing an independent local organization for emergency management, a city or village must develop and submit a complete comprehensive emergency management plan to the Texas Division of Emergency Management. If joining a local organization for emergency management, city and village governments must participate in the organization's emergency preparedness activities and provide support to emergency management programs. Regardless, each city or village may set up their own emergency operations/coordination center or entrust those functions to Travis County's Emergency Management Center.

In the State of Texas, special purpose districts are limited purpose local governments—separate from a county, city, or town government—created to perform a single function. They provide a range of services that are not otherwise available from county, city, and town governments, such as: conservation, diking and drainage, fire protection (firefighting), flood control zones, housing authorities (public housing), hospital districts, parks and recreation, public transportation, schools, water-sewer, and others. The areas served by special purpose districts

oftentimes overlap the geographic boundaries of counties, cities, and towns. As special purpose districts are not required to establish a local organization for emergency management or develop a local comprehensive emergency management plan, they are encouraged to work with their nearest local organizations for emergency management. In such circumstances, the capabilities of special purpose districts become integrated into local comprehensive emergency management plans.

Local Government Department and Agency Roles

Local department and agency roles are outlined in Appendix C and Appendix D to this document. In the above appendices, the Comprehensive Emergency Management Plan's annexes are aligned to Texas Emergency Support Functions to assist with plan coordination.

Regional Planning Organizations

Capital Area Council of Government

Regional Councils of Governments are voluntary associations of local governments formed under Texas law ([Tex. Gov. Code Ch. 391](#)). Regional Councils of Governments guide the unified development of a region, eliminate duplication and promote regional economies and efficiency. In addition, specific to emergency management, the Capital Area Council of Government supports regional preparedness planning needs that cross individual local governments' boundaries or require regional attention. Regional services offered through the Capital Area Council of Government include the following:

- Planning and implementing regional homeland security strategies
- Operating law enforcement training academies
- Maintaining and improving 911 systems
- Supporting local emergency alert and notification services
- Supporting regional crisis information sharing

Capital Area Trauma Regional Advisory Council

Regional Advisory Councils develop, implement and monitor regional emergency medical services trauma systems and facilitate trauma system networking within and among Trauma Service Areas. Membership in a Regional Advisory Council may include hospitals, physicians, nurses, emergency medical services providers, rehabilitation facilities, dispatchers, and community groups. The Capital Area Trauma Regional Advisory Council's primary functions are to:

- Develop and implement a regional emergency medical services/trauma system plan
- Provide public information and education about the prevention of trauma and a

trauma system

- Provide a forum for emergency medical services providers and hospitals to address Trauma Service Areas issues
- Network with other Regional Advisory Councils
- Document and report trauma system data

Voluntary and Private Sector Organizations

Voluntary Organizations Active in Disasters

Voluntary Organizations Active in Disasters are an important piece of Texas' emergency response plan. These organizations have the personnel and expertise to augment the state's capabilities or provide capabilities that the state does not have. Two Voluntary Organizations Active in Disasters are specifically named to the Texas Emergency Management Council ([Executive Order GA 05](#)): the Salvation Army and the American Red Cross, which provide emergency feeding facilities and shelter management, respectively. Beyond these, many national and local organizations offer a broad range of services to municipalities or directly to citizens.

Business and Industry Partnerships

Business and industry partners play a crucial role before, during, and after disasters. Texas businesses are involved in emergencies because large portions of Texas' infrastructure are privately owned. In addition, large amounts of the hazardous materials moved within or through Texas are handled by private industry.

Business and industry partners must observe standards for protecting critical infrastructure and develop individual continuity of operations plans. During disasters, many businesses may also work with the state and with Voluntary Organizations Active in Disasters to provide resources during incident response and recovery.

Communication and Information

To ensure effective communication and intelligence flow, emergency response agencies at all levels must establish communications systems and protocols to organize, integrate and coordinate intelligence among the affected agencies.

Communication

Each federal, state, and local jurisdiction or agency is responsible for developing its methods of communications. This includes policies for the provision of alerts and warnings and providing information to the media and public.

In Travis County, communications support is provided through coordination among multiple entities and the use of a wide range of resources. For more information, see Annex B, Emergency Communications.

Public Information

Public information activities are coordinated through a Virtual Joint Information System. The Virtual Joint Information System provides the mechanism for integrating public information activities among public information representatives, across jurisdictions, and with private-sector and non-governmental organizations. For more information, see Annex I, Emergency Public Information.

Alert and Warning

State-wide

Texas has a state warning system composed of three facilities to conduct warning operations: State Warning Point, Area Warning Centers, and Local Warning Points. In addition to these, the Federal Emergency Management Agency operates the Integrated Public Alert and Warning System. The State Warning Point is located in the State Operations Center in Austin. The facility operates 24-hours a day by Texas Division of Emergency Management personnel and is equipped with various primary, alternate, and redundant telecommunications systems. The facility receives warning information and incident reports from multiple sources, including federal, state agencies and local entities, and commercial transportation, utility, and petrochemical companies. For more information, see the Texas Warning Support Annex.

Travis County

The primary objective of Travis County's warning system is to notify key officials of emergency situations and disseminate timely and accurate warnings and instructions to the population at risk from the threat or occurrence of an emergency. Rapid dissemination and delivery of warning information and instructions may provide time for citizens to take action to protect themselves and their property.

The focal point of the warning function is the Local Warning Point, which operates around the clock. The Travis County Sheriff and City of Austin Police Communications Center are Primary Public Safety Answering Points and are collocated at the Combined Transportation and Emergency Communications Center. The Pflugerville Police Department operates a Primary Public Safety Answering Point located in the City of Pflugerville. When the Emergency Operations Center (also located at the Combined Transportation and Emergency Communications Center) is activated, it becomes the primary warning point for Travis County.

Travis County is also served by six secondary Public Safety Answering Points. These agencies are Austin Fire Department, Austin/Travis County Emergency Medical Services, University of Texas Police Department, West Lake Hills Police Department, Lago Vista Police Department, and Lakeway Police Department. All of these agencies operate around the clock and could be used as Local Warning Points.

The Office of Emergency Management provides support to all Travis County Local Warning Points in the dissemination of alerts and warning to residents. For more information on local warning, see Annex A - Warning.

Administration, Finance, and Logistics

This section describes general requirements for and the availability of services and support during emergency management preparedness, response, and initial recovery in Texas.

Disaster Assistance Requests

Texas grants the Governor authority by [Tex. Gov. Code Ch. 418](#), to declare a state-level disaster. The presiding officer of the governing body of an incorporated city or a county or the chief administrative officer of a joint board is designated as the emergency management director for the officer's political subdivision and serves as the Governor's designated agent in the administration and supervision of duties under Chapter 418 ([Tex. Gov. Code §418.1015](#)). A local emergency management director may exercise the powers granted to the Governor under this chapter on an appropriate local scale and may declare a local state of disaster.

Local Disaster Declaration

The chief elected official of jurisdiction may declare a local state of disaster for the following reasons:

- To exercise extraordinary powers
- To activate preparedness, response, and recovery aspects of any applicable local emergency management plans
- To provide additional liability protection to government agencies and special or volunteer emergency workers
- To formally request general assistance from the state and federal governments

According to [Tex. Gov. Code Ch. 418](#), a declaration of local disaster may not be continued or renewed for more than seven days except with the consent of the governing body of the political subdivision.

Proclamation of a State of Emergency

In Texas, as mandated by [Tex. Gov. Code Ch. 433](#), the Governor may proclaim a state of emergency and designate the area involved. The request for a gubernatorial declared state of emergency must come from the chief executive officer of the governing body of a county or municipality. Unlike a federal disaster declaration, a state of emergency declaration is only used in the following situations:

- A riot or unlawful assembly by three or more persons acting together by use of force or violence;
- Clear and present danger of the use of violence exists;

- Natural or man-made disasters.

While a natural or man-made disaster is one of these codified situations, the intent of an emergency declaration is to recognize the Governor's power to exercise the state's police power to provide adequate control over persons and conditions during periods of impending or actual public crisis or disaster. For most natural or man-made disasters, a disaster declaration is generally more appropriate.

An emergency directive expires 72 hours after the proclamation of the state of emergency for which it was issued. However, the Governor, by proclamation, may terminate or set a shorter period for a directive. The Governor may also proclaim successive states of emergency in 72-hour periods as necessary to protect health, life, and property in affected areas.

Disaster Summary Outline

As soon as possible, all local jurisdictions should begin gathering initial damage estimates. These figures need not be exact but are necessary to complete the Disaster Summary Outline as a basis for obtaining a Presidential Disaster Declaration. Event-specific Disaster Summary Outline pin numbers are provided through District Coordinators or the Stat Operations Center. Disaster Summary Outlines should be re-submitted as costs change or are better estimated.

Preliminary Damage Assessment

The Federal Emergency Management Agency coordinates with the state to conduct a Preliminary Damage Assessment and determine if the incident is of sufficient severity to require federal assistance under the Robert T. Stafford Disaster Relief and Emergency Assistance Act (Stafford Act). The Federal Emergency Management Agency uses the results of the Preliminary Damage Assessment to determine if the situation is beyond the combined capabilities of the state and local resources and to verify the need for supplemental federal assistance. The Preliminary Damage Assessment also identifies unmet needs that may require attention.

Federal Declaration without a Preliminary Damage Assessment

The requirement for a joint Preliminary Damage Assessment may be waived for those incidents of unusual severity and magnitude that do not require field damage assessments to determine the need for supplemental federal assistance under the Stafford Act, or in such other instances determined by the Federal Emergency Management Agency Regional Administrator upon consultation with the state. However, it may be necessary to conduct an assessment to determine unmet needs for managerial response purposes ([44 CFR 206.33](#)).

Pre-Disaster Emergency Declarations

A governor may request an emergency declaration in anticipation of the imminent impact of an incident that threatens such destruction as could result in a major disaster. Such requests must meet all of the statutory and regulatory requirements for an emergency declaration request. In addition, requests must demonstrate the existence of critical emergency protective-measure needs that are beyond the capability of the state and affected local governments.

State Request for a Presidential Declaration

When it is clear that state capabilities will be exceeded, the Governor can request federal assistance, including assistance under the Stafford Act ([42 USC § 5170](#)). The Stafford Act authorizes the President to provide financial and other assistance to state and local governments, specific private nonprofit organizations, and individuals to support response, recovery, and mitigation efforts following a presidentially declared emergency or major disaster.

Federal Analysis of State Request

The Federal Emergency Management Agency administrator assesses the situation and the request and recommends the President through the Department of Homeland Security on a course of action. The decision to approve the request is based on factors such as the amount and type of damage, the potential needs of the affected jurisdiction, the availability of state and local government resources, the extent and type of insurance in effect, recent disaster history, and the state's hazard mitigation history.

Declaration of Emergency or Major Disaster

The President can declare an emergency or major disaster under the Stafford Act, providing federal government resources to support the states' response and recovery activities. While presidential declarations under the Stafford Act release federal resources and funding to support response and recovery, federal agencies may also provide assistance under other authorities or agreements that do not require a presidential declaration.

Expenditures and Record-Keeping

Each county agency and jurisdiction is responsible for establishing administrative controls necessary to manage funds during an incident. Entities also provide reasonable accountability and justification for federal reimbursement in accordance with established guidelines.

Per established procedures, entities may seek financial assistance to cover extraordinary expenses for disaster operations costs from the disaster contingency fund. Under the provisions of the interstate Emergency Management Assistance Compact, Texas is responsible for the reimbursement of costs incurred by responding states during the delivery of mutual aid or for the out-of-state sheltering or the repatriation of Texas residents.

At the end of an incident, all reports should be protected and retained for audit purposes. For more information, see the Travis County Comprehensive Emergency Management Plan Annex J – Recovery and Annex N – Direction and Control.

Mutual Aid

The Texas Statewide Mutual Aid System was established to provide integrated statewide mutual aid response capabilities between local government entities that did not have written mutual aid agreements. Travis County utilizes the Texas

Statewide Mutual Aid System to request help when local capabilities are exhausted or insufficient to address a disaster need. For more information, see Annex M, Resource Management.

Texas is a member of the Emergency Management Assistance Compact, a congressionally ratified organization that provides procedures for rendering emergency assistance between states. After an emergency declaration, Texas can request and receive reimbursable aid through the Emergency Management Assistance Compact from other member states. For more information, see the Texas Emergency Management Annex (ESF-5).

Resource Requests

Travis County utilizes the WebEOC application to manage resource and support requests. During Emergency Operations Center activations, requests from local agencies and jurisdictions are identified, routed, authorized, and fulfilled via WebEOC. When local resources are exhausted, WebEOC is the portal for submitting State of Texas Assistance Requests to the Texas Division of Emergency Management.

Continuity of Government

Emergencies and disasters may impede the ability of county and local governments to provide for the safety and well-being of the people of Travis County. Continuity of government consists of various comprehensive activities designed to preserve our representative form of government and the continued ability of state and local governments to provide protection and essential services to the public. Appendix E, Continuity of Government, identifies coordination and control actions that ensure state government can continue to operate effectively, regardless of the incident or the measures necessary to restore the state government to its pre-disaster condition.

Plan Administration

This section describes the process by which this document is maintained and updated.

Development

The County Judge is responsible for approving and promulgating this plan. The Travis County Office of Emergency Management is responsible for disaster planning and coordination in Travis County. The Travis County Office of Emergency Management is responsible for ensuring this document's appropriate development and distribution and any changes.

The Travis County Office of Emergency Management develops planning goals and objectives using federal guidance, the Threat Hazard Identification Risk Assessment, and analytical research. In addition, the Travis County Office of Emergency Management engages interagency stakeholders to understand how a hazard or threat would evolve in the state and what defines a successful outcome for incidents exceeding local jurisdictions' capacities.

It is a fundamental responsibility of all individuals with a statutory obligation for disaster planning and coordination to consider the whole community's needs, including children, individuals with disabilities, and others with access and functional needs.

Relationship to Other Plans

The Travis County Emergency Management Plan aligns vertically with federal, state, and local emergency operations plans. The plan describes emergency management coordination between state, local, and federal government during a disaster. In addition, it outlines how the state will support requests for assistance from local jurisdictions. The County Plan was developed in coordination with multiple county agencies involved in emergency management. The County Plan aligns horizontally with those county agencies' emergency management plans and incorporates their plans into the County Plan by reference in its functional and hazard annexes.

Maintenance

The Chief Emergency Management Coordinator authorizes, and issues changes to this document until it is superseded. This document and all attachments are living documents. Participating entities are responsible for taking part in plan reviews and are required to provide information concerning capability changes that affect their emergency management responsibilities.

The Travis County Office of Emergency Management coordinates the plan updating process, and it maintains the plan after receiving feedback and updates from partner agencies. According to Tex. Gov. Code § 418.188, state agencies, political

subdivisions, and inter-jurisdictional agencies must evaluate their response to a disaster, identify areas of improvement, and report their assessment to the Texas Division of Emergency Management no later than 90 days after requested by the division.

Training, Exercise and After-Action Reports

The County Plan is exercised annually to provide practical, controlled, and operational experience to those responsible for emergency management and response. Following the conclusion of any significant disaster, incident, or exercise, the lead agency's representatives will conduct an after-action review of and prepare an after-action report/improvement plan on the group's activities during the disaster, incident, or exercise.

Record of Changes

The Chief Emergency Management Coordinator authorizes, and issues changes to this document until it is superseded. This document and all attachments are living documents. Councilmember representatives are responsible for participating in plan reviews and are required to provide information concerning capability changes that impact their emergency management responsibilities. The Travis County Office of Emergency Management coordinates the plan updating process and maintains the plan after receiving feedback from partner agencies.

Lead and support agencies must ensure all records necessary for emergency management operations are available, and that duplicate records are held at alternate locations.

Use this table to record the following information:

Appendix A: Emergency Operations Center Readiness Levels

The State Operations Center (SOC) is always operational (24/7). SOC readiness levels, outlined below, apply depending on the level of perceived threat or incident severity. Additionally, the SOC may fulfill State of Texas Assistance Requests (STARs) and publish Situation Reports (SITREPs) at all activation levels.

Readiness Level	Emergency Operations Center Actions Taken
-----------------	-------------------------------------------

IV: Normal Conditions	<ul style="list-style-type: none">• No significant emergency or disaster is present.• Daily Operations runs the Emergency Operations Center, maintaining equipment and facilities.• Preparedness activities may be conducted.• Warning and communication systems are tested.• Natural, technological, and homeland security threats are monitored.• Local responders resolve routine emergency incidents.
----------------------------------	----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

III: Increased Readiness Conditions	<ul style="list-style-type: none">• A significant emergency has not yet occurred, but readiness is raised due to increased vulnerability to a specific hazard, or an emergency has occurred. Still, the readiness level only escalates to level III.• The duty officer notifies the Chief Emergency Management Coordinator.• Key staff and personnel are alerted. In addition, staffing may increase at emergency facilities to provide additional situation monitoring.• Equipment is checked for availability.• Contingency plans are evaluated and updated as needed.• Advisory notices are sent to county departments and municipal entities, and appropriate officials are briefed on anticipated risk situations and potential impacts.• Emergency public information activities commence.• Local responders resolve routine emergency incidents.• The Emergency Operations Center begins to staff with representatives from appropriate agencies and organizations.
------------------------------------------------	------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

Readiness Level Emergency Operations Center Actions Taken

II: Escalated Response Conditions

- The emergency has expanded beyond the capabilities of local responders.
- Regular county and local government operations may be impaired.
- Emergency facilities increase staffing, expand hours of operation and intensify coordination.
- Response elements may be activated and deployed.
- Mutual aid resources may be requested.
- Government officials and agency representatives are briefed on the current situation and anticipated impacts.
- Emergency public information activities are expanded.

I: Emergency Conditions

- The scope of the incident has expanded beyond the response capability of local agencies.
 - As local jurisdictions request resources, the Emergency Operations Center coordinates assistance and may seek intrastate mutual aid and federal aid as needed.
-

Appendix B: Emergency Operations Center Organizational Chart

The Emergency Operations Center organizational chart below shows the Texas incident command structure, which follows the National Incident Management System and supports the Incident Command System. The design is modular, extending and expanding as needed to incorporate all elements necessary for the incident's type, size, scope, and complexity.

Appendix C: Annex Responsibility and Emergency Support Function (ESF) Alignment

The following table provides the alignment of emergency support functions and annexes and highlights the objectives of each emergency support function and annex.

ESF	Title	Objectives	Annex
ESF-1	Transportation	<ul style="list-style-type: none"> • Coordinate state transportation infrastructure support. • Support highway emergency operations. • Support railway emergency operations. • Support emergency operations for aviation. • Support maritime emergency operations. • Support pipeline emergency operations. Appendix E: Continuity of Government

Continuity of government requirements includes coordination and control actions to help ensure county government continues to operate effectively, regardless of the emergency or disaster. Requirements and guidelines also specify steps necessary to restore county government operations. Lines of succession for Travis County will be following existing state and local laws and policies and local government emergency management plans.
